

Recommendation 2: Website Restructuring

Submitted by: Roz Frampton

Region:

I recommend, with modifications from the Assembly floor if any, that the website be the one central media source for key information and be updated to allow for various types of software to be uploaded such as PowerPoint presentations and while centrally maintained, named people should be enabled to upload information to specific areas of the website, relevant to their country or agreed areas of focus. I further recommend that the first of February, June, and October be identified as times for regions to check the accuracy of website data and to provide updates where required. The ATA should be placed on this website for the majority, and just continue to be sent out, as now, to those who cannot access the website.

RATIONALE:

Having the website as the central media source for key information facilitates efficient and effective communication across regions. Alternative methods of communication should remain for those who cannot access websites or electronic communication, such as email, telephone trees and face to face communication. The updating process by regions will reduce data being outdated.
